

Hydrocolloid plasters

Description

•**Cure-Aid® foot care plasters:** are hydrocolloid dressings designed to protect and relieve pain from blisters. With advanced hydrocolloid technology, they cushion the skin, reduce friction, and absorb moisture to create an optimal moist healing environment that accelerates natural wound repair. Providing instant pain relief and long-lasting protection, these dressings adhere securely for up to 7 days, helping you stay active with confidence in daily life. Available in special shapes as well as rolls.

•**Cure-Aid® cold sore patches:** use hydrocolloid active gel technology to promote faster healing and reduce scabbing, working from the first sign through all stages of the cold sore. Their discreet design shields the affected area, helping to reduce social embarrassment, while forming a protective virus barrier to lower the risk of contamination.

•**Cure-Aid® hydrocolloid dressings:** are designed with a unique bandage shape that provides reliable waterproof protection. The adhesive seals around the pad to create an optimal healing environment that supports recovery and helps prevent infection.

•**Cure-Aid® acne patches:** A breathable, discrete, transparent cover that absorbs oil and pus from clogged pores. The patch serves as a protective barrier, minimizing the urge to squeeze. It is drug-free, non-drying, non-irritating, simple to use, and comes in two sizes for day or night coverage. Suitable for most skin types, including normal, dry, oily, or combination skin.

Intended Purpose:

- Cushioning and protection
- Maintaining a moist environment.
- Absorption of exudates.

Indications:

- Cure-Aid® Foot care plasters:** Protection and healing of Blisters, corns, callus, Bunions
- Cure-Aid® cold sore patches:** Protection and healing of cold sores.
- Cure-Aid® hydrocolloid dressings:** Protection and healing of minor burns, scrapes, wounds and blisters.
- Cure-Aid® acne patches:** Protection and healing of Acne, pimples or blemishes.

Intended Patient Population:

Suitable for all patient population except for those documented in the contra-indications section.

Intended User:

Hydrocolloid plasters are intended for the treatment of human skin by lay persons under the supervision of healthcare professionals.

Performance characteristics:

•**Cure-Aid® Foot care plasters:** contain hydrocolloid particles that absorb exudate from the wound, forming a protective gel that maintains a moist environment conducive to natural healing. The hydrocolloid layer cushions the skin, redistributes pressure, and reduces friction to provide instant pain relief while protecting the wound from further irritation. The tapered adhesive edges ensure secure fixation, allowing the plaster to flex naturally with movement and stay in place for several days.

Hydrocolloid plasters

The waterproof yet breathable design maintains an optimal healing environment by keeping moisture in and protecting against external contaminants.

•**Cure-Aid® cold sore patches:** utilize Hydrocolloid technology to absorb excess exudate from the lesion and maintain an optimal moist healing environment. This environment promotes the body's natural healing process and helps to prevent scab formation. The patch also functions as a protective barrier, acting as a virus shield that reduces the risk of contamination and prevents external factors from aggravating the cold sore.

•**Cure-Aid® hydrocolloid dressings:** The hydrocolloid gel pad helps relieve the pain of minor injuries by cushioning the wound and absorbing exudate from open wounds and blisters. By maintaining a moist healing environment, it prevents scab formation, which can otherwise interfere with new tissue growth. Allowing the wound to heal without scabs and without disturbance reduces the likelihood of scarring.

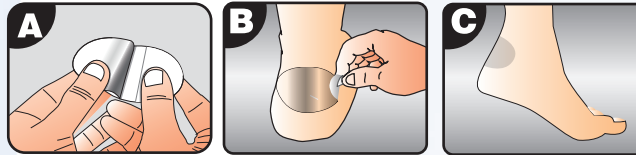

•**Cure-Aid® acne patches:** The hydrocolloid material absorbs oily secretions and pus, forming a visible change from clear to white that "visibly indicates that it's working." These non-drying, transparent pimple patches work like a sponge to absorb pus and oil from clogged pores.

Instructions For Use

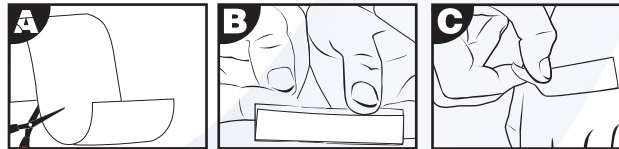

Application Method:

Cure-Aid® Foot care plasters:

1. Clean and dry skin before use, ensuring blister area is free of creams and oils.
2. in the case of the hydrocolloid roll, cut to the appropriate size before use.
3. Remove the bottom paper, avoiding touching the adhesive side.
4. Leave in place until it starts to detach (Note: may stay in place up to 7 days)

Hydrocolloid roll

Frequency of change:

- Patch may stay in place up to 7 days.

Instruction of change:

- Do not remove the patch until it starts to loosen naturally, then replace it with a new one.

Precautions for change/application:

- When removing, slowly stretch the patch along the skin instead of pulling it upwards.

Cure-Aid® cold sore patches:

1. Wash your hands before and after use. Ensure your skin is clean and dry. Do not apply any cream on the lip, as the patch may no longer stick to your lip.
2. Tear off one product along the perforated edge to separate it from the others. Take care not to press down on the protective teal cover.
3. Hold the clear paper applicator at the curved edge.
4. Using both hands, carefully peel off the clear paper applicator from the protective teal colored cover.
5. You will see the round cold sore patch on the upper part of the applicator. Take care not to touch the adhesive side of the patch.
6. Apply this part of the applicator to the cold sore and using a mirror, gently press down to firmly place the patch on to the cold sore.
7. Gently peel back the applicator leaving the **Cure-Aid® cold sore patches** in place. Make-up or lipstick can be applied over the patch.

Hydrocolloid plasters

“For best results start using when you first feel a tingle and continue using a patch day and night throughout the outbreak until the lesion is fully healed.”

Frequency of change:

- Patch stays in place for up to 12 hours.
- For best results, use continuously (day and night) from the first tingling sign until the cold sore is fully healed.

Instruction of change:

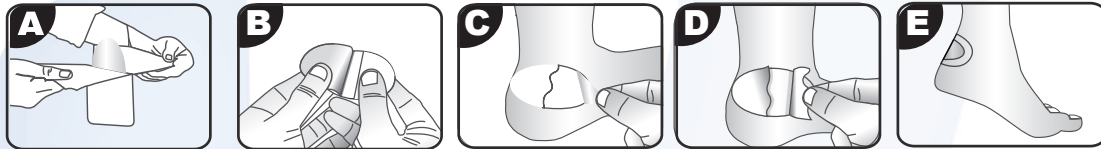

- Do not remove the patch until it starts to loosen naturally (usually after about 8 hours), then replace it with a new one.

Precautions for change/application:

- When removing, slowly stretch the patch along the skin instead of pulling it upwards.

Cure-Aid® hydrocolloid dressings:

- 1.Before applying bandage to wound, clean the wound thoroughly and let it dry.
- 2.Open the wrapper and peel off one side of the release liner (1).
- 3.Attach the bandage over the wound and then peel the other side of release liner (1).
- 4.Gently add the pressure on the film to make it conformable.
- 5.Remove release liner (2).
- 6.To achieve an optimum impact, please hand press the edge of wound dressing at 30 seconds.
- 7.Dressing swells up and turns white as it absorbs the exudate from the wound.

Frequency of change:

- Must observe the wound condition in the period of using hydrocolloid dressing. Under normal circumstances, the wound will gradually reduce the exudate, and the wound will be healed for about three days to two weeks. If it is not used right after the wound injury, it will prolong the healing time.
- When the dressing turns white or exudate starts to leak, please remove and replace the dressing immediately.

Instruction of change:

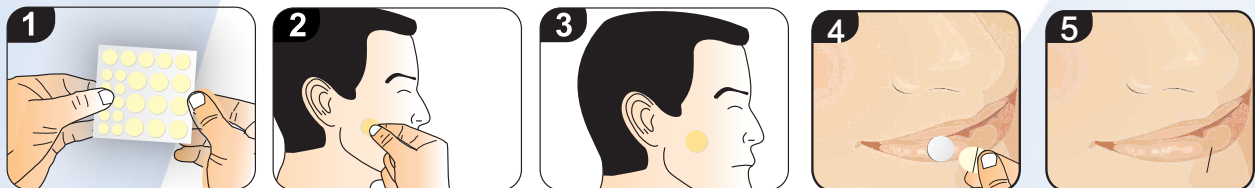

- If the wound is not completely healed, please continue to use the product.
- If the wound is not improved, please consult doctor immediately.

Precautions for change/application:

- When peeling off, gently remove it from the edge of the dressing at a low angle.

Cure-Aid® acne patches:

- 1.Cleanse your face and hands well. Gently pat dry with a clean towel.
- 2.Peel open the Cure-Aid® acne patches Cover pouch. Center one cover on the blemish.
- 3.Gently press the edges of the cover with clean and dry fingers for better adhesion.
- 4.Change your cover daily. Once the color changes to white, oily secretion has been absorbed. Replace the cover with a new one.
- 5.Keep unused covers in the plastic pouch.
- 6.If wearing makeup, apply the cover first.

Frequency of change:

- Change the patch at least every 8 hours or earlier if it fully turns white.

Instruction of change:

- Do not remove the patch until it starts to loosen naturally. Replace with a new patch once removed.

Precautions for change/application:

- When removing, slowly stretch the patch along the skin instead of pulling it upwards.
